Installation Guide

Step 1: Site Assessment

Before installation, verify that the intended location meets environmental and electrical requirements. Check for adequate ventilation, secure mounting, and compliance with local codes.

Step 2: Mounting

Mount the AV 602 onto a DIN rail or a suitable panel. Ensure that the device is firmly seated and that all mounting screws are tightened to the manufacturer's torque specifications.

Step 3: Wiring

- Power Connection: Connect the 120/240 /V supply to the input terminals, observing correct polarity.
- Signal Lines: Wire the communication ports according to the chosen protocol. For Modbus RTU, connect the RS 485 network using twisted pair cable.
- Grounding: Properly ground the unit to prevent electrical shock and EMI interference.

Step 4: Configuration

Using Schneider Electric's EcoStruxure software, configure the AV 602's parameters—channel settings, communication addresses, and protection thresholds. Save the configuration to the device's memory.

Step 5: Testing

Run a diagnostic test to confirm that all channels are operational, communication is stable, and protection settings trigger correctly under simulated fault conditions.

Step 6: Commissioning

Integrate the AV 602 into the larger automation network, ensuring that it is visible to SCADA and that real time data is displayed correctly. Document the installation for future maintenance.

Maintenance and Troubleshooting

Regular Checks

- Inspect for physical damage or corrosion.
- Verify that all firmware updates are applied.
- Check communication logs for errors.
- Test protection functions periodically.

Troubleshooting Common Issues

1. Communication Failure: Verify cable integrity, confirm correct IP or Modbus addresses, and check for interference.
2. Overcurrent Alerts: Inspect connected loads for faults, verify correct current rating, and ensure proper grounding.
3. Temperature Rise: Confirm adequate ventilation and that the device is not overloaded.
4. Firmware Errors: Re flash the firmware and reset configuration settings.
